

## WELCOME / GATEWAY LANDMARK

Public art call application

The sculpture will take the shape of a monumental gateway resembling an arched bridge. Visitors will be able to walk underneath it or cross over it to enjoy an elevated viewpoint.

The railing will spell **WELCOME** when entering from the street, and **GOOD BYE** when leaving the park.

The entire structure will be crafted using the rocaille technique, an 18th-century Romantic method that imitates natural forms and wood through sculpted cement.

The technical plans, dimensions, circulation, safety, and maintenance will be developed in Phase 2 of the selection process.
